Lee Brass

Brass Castings Since 1917

The Flagg-Flow product line was developed in the early 1940's in conjunction with Naval Sea System Command personnel. We created a durable bronze pipe fitting to join Iron Pipe Size (IPS) red brass, copper, and copper nickel pipe or tubing. Flagg-Flow Fittings, when properly brazed to pipe or tubing, provide a connection which is stronger than the pipe or fitting.

Specifications: - Fittings

MIL. F-1183 - 6" and smaller than 6" 200 lbs. W. S. P. (Dimensions)
MIL. F-1183 -Over 6" 150 lbs. W. S. P. 400 lbs. W.O.G. (Dimensions)

Material

ASTM B-61

(as permitted in latest revision of MIL. F-1183)

(The latest issue of any specification shall constitute the authority)

Since the introduction of our Flagg-Flow_® threadless bronze fittings, we have been most gratified by their ready acceptance in a constantly widening number of applications in the piping field.

Flagg-Flow_® Bronze Fittings meet today's increasing demand for "one piece" security on installations using I.P.S. brass, I.P.S. copper pipe or tubing, or I.P.S. copper nickel tubing.

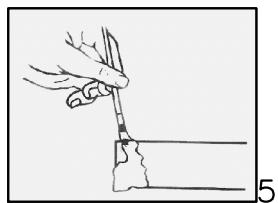

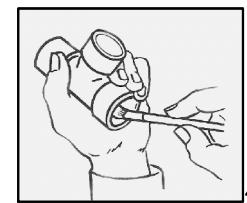

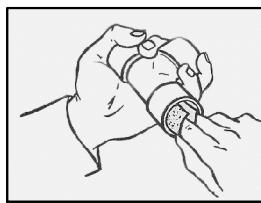

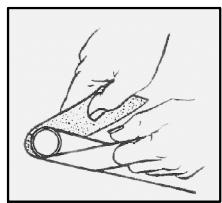

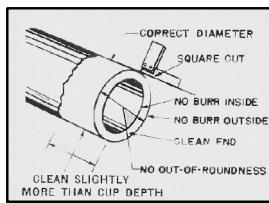

Attention is called to the fact that if silver brazing fittings are used, the order for copper or red brass pipe must state that it is to be used with silver brazed fittings and must be of a proper outside diameter to permit insertion into the fittings and make a proper joint.

With a wider range of material from which to choose, pipe fabricators may now select the pipe or I.P.S. tubing best suited to special needs; yet retain the strength and simplicity of a Flagg-Flow_® installation.

There are no threads to weaken the joint and the full depth of the fitting cup is brazed to the tube. Flagg-Flow_® Type A Fittings have a streamlined interior. This interior design tends to reduce turbulence. Close tolerances in the machining of the cups ensure rigid support and a thorough bond.

Flagg-Flow_® Fittings in this section are tested in accordance with the requirements of the above specifications.

Lee Brass Company

Caution – Do Not Use Tin Lead Solder

Fig. 1 - Pipe should be cut square to ensure an all-round contact with the bottom of the socket of the fitting. Any burrs or upset on the end of the pipe should be removed by reaming or filing.

In all cases, a reducing flame should be used to preheat the pipe around its entire circumference. Heating of the pipe should continue until the flux is clear and transparent.

The flame should then be applied to the circumference of the fitting until the flux on the face of the fitting is transparent.

This is an indication that the assembly is at approximately 1100° F.

At this point, the brazing technique will depend on whether the fitting is face-fed or of the preinserted ring type.

Figs. 10 and 11 - If it is of the preinserted ring type, a segment of the band of the fitting should have additional heat applied to it with a wiping motion from the base of the cup to the pipe. This will produce a pumping action that will force the alloy from the groove and distribute it throughout the joint area. If the gap between the pipe and fitting is too large, it may be necessary to prime the joint by face-feeding supplemental alloy in order to start the insert flowing.

Once the alloy starts to flow, heat should be applied to another segment of the fitting and the brazing procedure repeated until the joint is completed.

It is desirable to have a fillet around the circumference of the joint when it is complete. If this was not obtained with the alloy in the insert, then supplemental alloy should be used. (CAUTION: Do not overheat the fitting as this will cause it to expand and the pumping action will be lost.

Figs. 12 and 13 - When the fitting is the face-fed type, the following procedure should be used.

After the initial preheat of pipe and fitting, a segment of the cup of the fitting should be heated with most of the heat being applied to the base of the cup. The flame should be directed toward the pipe in order to keep the pipe from cooling.

The brazing alloy should be applied to the face of the fitting in the area where the heat is being applied. The alloy should be fed until the joint area is filled and a fillet appears at the face of the fitting. After the fillet has formed, the adjoining segment should be heated and the procedure repeated. This procedure is followed until there is a fillet around the joint.

On larger sizes (8" and above), it may be necessary to use two torches in order to maintain a uniform temperature.

Cleaning

Figs. 2 and 3 - Surfaces to be joined must be free of all grease, oil, oxides and dirt of any kind. Oil and grease can be removed with a solvent such as acetone or alcohol (Carbon Tetrachloride should not be used). Dirt and oxides can be removed with an abrasive cloth.

Fluxing

Figs. 4 and 5 - The brazing flux should be of a paste like consistency and applied evenly to the cleaned surfaces of the pipe and fitting. If necessary, warm water may be added to the flux to obtain the desired consistency.

Assemble & Support

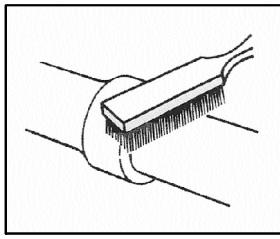

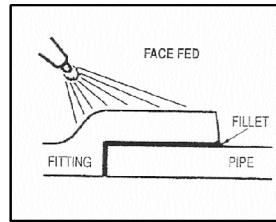

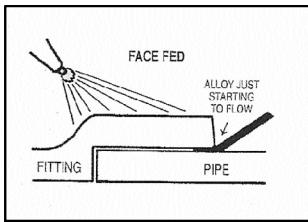

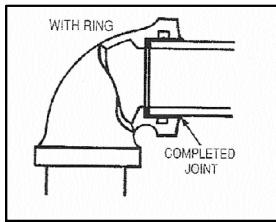

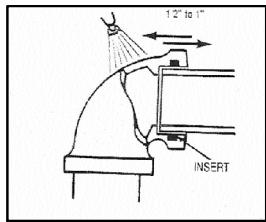

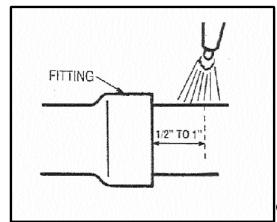

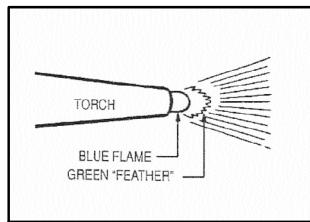

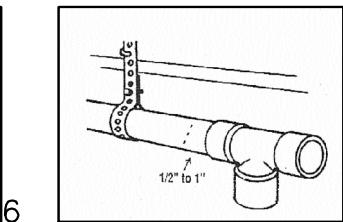

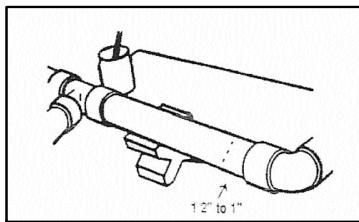

Figs. 6 and 7 - Insert the pipe the full depth of the cup of the fitting and rotate approximately 1/2 turn in order to ensure that the flux is evenly distributed in the joint area. The depth of the insertion can be checked by inscribing a line at a predetermined distance from the end of the pipe.

The piping assembly must be adequately supported to ensure proper alignment and minimize stress on the joint area during the brazing cycle.

Brazing

Figs. 8 and 9 - Oxyacetylene equipment is recommended for the fabrication of Flagg-Flow fittings, although any oxyfuel gas combination can be used.

The position of the joint and the type of fitting, whether face-fed or of the preinserted ring type, is immaterial during the preheating cycle.

Use water and a stiff brush to remove excess flux after completing a joint.

Flux Removal & Visual Inspection

Fig. 14 - All flux must have been removed from the completed joint for a visual inspection and pressure testing. This is best accomplished by quenching the assembly with water after it has air cooled to approximately 200° F.

After the flux has been removed, a smooth fillet should be visible around the entire circumference of the joint.

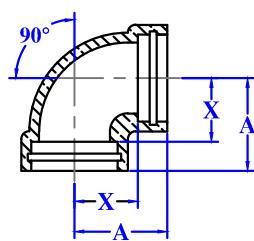

If there are any voids in the fillet area that should have flux reapplied and the brazing procedure repeated in that area.

| Brazing Alloys | | | | |
|--|--------------------------------|--------------------------|--------------------|--------------------------------------|
| For Best Results, the Alloy Conforming to the Following Specification is Recommended | | | | |
| AWS A5-8-56T | Federal Specification QQ-B-654 | Melting Point Degrees F. | Flow Point Degrees | Brazing Temperature Range Degrees F. |
| B CUP-5 | 3 | 1185 | 1300 | 1300-1500 |

Fluxes: The flux used should be that recommended by the manufacturer of the brazing alloy.

(The latest issue of any specification shall constitute the authority)

The Unions and Union Fittings in this section can be supplied face-fed, grooved only, or with the ring of silver brazing alloy.

The same standards of quality inherent in all Flagg-Flow® products are applicable to the items shown in this section. Quality control methods of the highest order are maintained. Close adherence to allowable tolerances and strict metallurgical control is assurance of a high quality product.

The 300 Lb. Unions and Union Fittings shown in this section are also for commercial installation at the designated working steam pressure. The 300 Lb. Unions in this section are not designated for use with the 800-1500 Lb. fittings on naval installations.

See. 800-1500 Lb. Unions

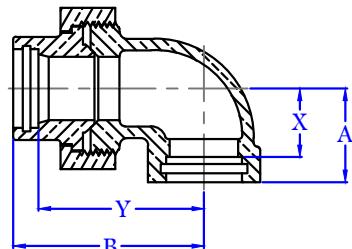

Flagg-Flow® Unions and Union Fittings are tested in accordance with the requirements of the above specifications.

Available:**

Send for a copy of our booklet entitled...

"Successful Brazing with Threadless Bronze Fittings"

This book is for those who put piping systems together and deals fully with subjects as listed in the various sections shown below. It gives the basic facts needed in making silver-brazed joints. Because the information is for practical people on the job, little has been included on theoretical design data. The science of silver-brazing is discussed only where it helps explain the work.

Section 1 . . . Where And Why Silver-Brazed Fittings Are Used

Section 2 . . . What Happens In A Sound Brazed Joint

Section 3 . . . The Right Tools And Materials

Section 4 . . . What You Do To Braze A Pipe Joint

Section 5 . . . How To Work In Different Positions

Section 6 . . . Various Kinds Of Fittings

Section 7 . . . Doing A Good Job The Easy Way

Section 8 . . . Brazing Terms And What They Mean

Section 9 . . . Dimensions, Weights And Tolerances Of Threadless Copper Pipe And CU. NI. Tube

BRONZE FLANGES FOR BRAZED JOINTS

SPECIFICATIONS and SERVICE: - FLANGES

DIMENSIONS:-

MIL.- PRF-20042:50-150-250-400 Lb. W.O.G. (Navy Type)

BuShips Dwg. 810-1385892 200 Lb. W.O.G.

(Navy Butterfly Valve Type)

ANSI B-16.24:150-300 Lb. W.S.P. (Commercial Type)

MATERIAL:-

ASTM B-61 (Navy* and Commercial Type)

(The latest issue of any specification shall constitute the authority)

The Flanges in this section can be supplied face-fed or grooved only.

Flagg-Flow® Flanges listed herein represent the more popular items used in Naval and Commercial Construction.

Special Flanges and Bulkhead Flanges are not illustrated. Information will be furnished upon request.

Flanges will be furnished FACED AND DRILLED unless otherwise specified.

SPECIAL FINISHING: Flanges can be furnished blind and faced only.

Blind Flanges, Reducing Flanges or Flanges with special reaming of the waterway are priced on application.

Flagg-Flow® Flanges are tested in accordance with the requirements of the above specifications.

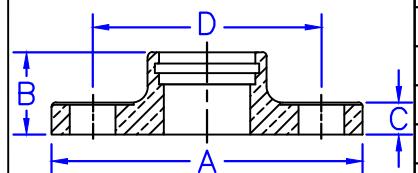

Flanges - Commercial Type

150 Lbs. W.S.P. at 450°F. 225 Lbs. W.O.G. at 150°F.

The fittings in this section can be supplied with the pre-inserted ring of silver brazing alloy or grooved only. The fittings in this section are made to order only.

These fittings are tested in accordance with the requirements of the above specifications.

BRONZE FITTINGS DESIGNED FOR UT INSPECTION OF BRAZED JOINTS

1500 PSI W.O.G. (1/8" to 2" sizes)

800 PSI W.O.G. (2 1/2" to 8" sizes)

SPECIFICATIONS:

Dept. of Navy BuShips Dwg. 810-1385942 (Dimensions)

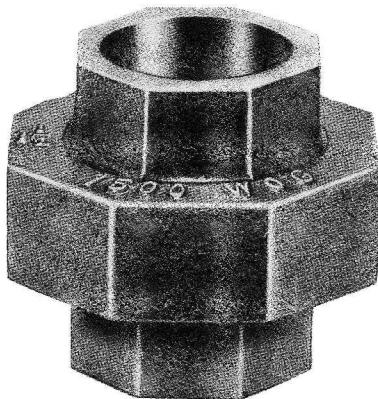

ASTM B-61* (Chemical and Physical Properties)

*As authorized by BuShips letters 9480/23, Ser 648A1-912, 13 August 1963 & 9480. Ser 648A11-1321, 7 August 1964.

This type of fitting is normally furnished grooved for, but without the pre-inserted ring of silver brazing alloy. Exterior machined surfaces and sockets are protected from damage during shipping.

These fittings are tested in accordance with the requirements of the above specifications.

Please Use Flagg Figure Numbers When Ordering.

Terms

Flagg-Flow Fittings and Flanges (g) are furnished grooved for, but less brazing rings. Brazing rings are furnished loose and must be ordered separate. Brazing rings are not inserted at the factory.

Remittances must be made in funds free of exchange or collection charges.

The amount of any excise, sales, purchase, use, transaction, or other similar tax imposed or assessed under any effective statute applicable to material sold by us shall be borne by the purchaser, and if same are payable to us, will be added to the purchase price. All orders and/or contracts are accepted subject to the understanding that we are not liable for delays or inability to ship caused by fire, strikes, act of God, or other circumstances beyond our control.

All orders and/or contracts are received subject to final acceptance by our general office.

Claims for shortages must be made immediately upon receipt of material, and be accompanied by the following information:

- (a) Itemized list of shortages.
- (b) Order number of shipment in question.
- (c) Package number.
- (d) Gross and net weights of package.

(This information is essential as our shipments are checked by count and weight)

Claims for loss or damage to material in transit must be made directly to the carrier. Our material is sold F. O. B. Plant and our responsibility ceases after the material is delivered to carrier in good condition.

Material must not be returned without our express permission given in writing, and then only in accordance with our shipping instructions and terms.

Orders for material of special designer specification are made to customer's order and are not subject to cancellation or return.

All orders received by us for delivery under Government Contracts are accepted subject to the provisions of the United States Government's standard termination clause in effect at the time the order is accepted by us.

Prices and designs are subject to change without notice.

Credit terms: Upon Approval

MINIMUM ORDER: \$ 100.00 per order.

Warranty

Lee Brass will, at its election, furnish replacement fittings without cost or will credit your account with the cost of such fittings for all fittings purchased by you and found by Lee Brass to have defects in materials and workmanship. Lee Brass' obligation to furnish replacement parts herein will be limited to making replacements at its factory at no charge to you for those items returned to Lee Brass with transportation charges prepaid and which, upon examination by Lee Brass, shall be found to be defective in material and workmanship under normal use and service. Lee Brass' obligation to furnish replacement fittings shall not apply to any item which has been subject to abuse or misuse, or to any fitting damaged from causes other than the normal and ordinary use of the fittings.

Except as expressly stated above, seller makes no warranty, expressed or implied, whether of merchantability or fitness for any particular purpose or use or otherwise, on any product, or on any parts or labor furnished during the sale, delivery or servicing or any product.

Except as expressly stated above, Seller shall not be liable to the Buyer or to any other person, firm, or corporation for any incidental or consequential loss, damage, or injury arising out of any breach of warranty or any other act or default relating to Buyer's order or to product or services provided to Buyer, even if any such loss, damage, or injury is caused by Seller's negligence. The correction of defects as provided in the warranty statement above shall constitute Seller's full obligation with respect to all claims and Seller's liability shall in no event exceed the unit purchase price of the product in question.

Any lawsuit or other action based upon breach of the contract or upon other claim arising out of this sale (other than an action by Seller for any amount due to Seller by Buyer) must be commenced within one year from the date of the tender of delivery by Seller or, in the case in the cause of action based upon an alleged breach of warranty, within one year from the date within the warranty period on which the defect is or should have been discovered by Buyer.
